

Conditional Formatting (Data Bar, Icon set, etc.)

① How do you apply conditional formatting to highlight cells with specific text?

→ Conditional formatting can be used to highlight cells containing particular text values.

1. Select the range of cells
2. Go to Home → Conditional Formatting
3. Choose Highlight Cells Rules → Text that Contains
4. Enter the specific text you want to highlight
5. Select a formatting style (font color, font, fill) and click OK.

Excel will highlight all cells that contain the specified text.

② What are data bars in Excel, and how are they used in conditional formatting?

→ Data bars are graphical bars displayed inside cells to visually represent values.
They help compare values quickly within a range.

Step to use:

- ① Select the data range
 - ② Go to Home → Conditional Formatting → Data Bars.
 - ③ Choose a color or gradient style.
 - ④ Larger values show longer bars; smaller values show shorter bars.
- This makes trends and comparisons easy to understand.
-

- ③ How would you create a rule to apply color scales to a range of cells?
- Color scales apply different colors based on cells values.

Steps:

1. Select the desired cell range
2. Click Home → Conditional Formatting →
3. Choose a 2 color or 3 - color scale.
4. Excel automatically assigns colors based on minimum, midpoint and maximum values
5. Higher or lower values are visually distinguished using colour.

④ Explain how to use icon sets in conditional formatting rule based on a formula?

Icon sets use symbols to categorize data values.
Steps:

1. Select the data range.
2. Go to Home → Conditional Formatting → Icon Set
3. Choose an icon style (arrows, traffic lights, symbols)
4. Excel assigns icons based on value thresholds
5. Icons help quickly identify performance or status levels.

5. How do you create a custom conditional rule based on a formula?

→ Custom rules allow formatting based on formulas.

Steps:

1. Select the target range.
2. Go to Home → Conditional formatting → New Rule
3. Choose use a formula to determine which cells to format
4. Enter a logical formula (eg. $=A1 > 50$)
5. Set the format and click OK.

⑥ what is the purpose of the manage rules option in Conditional formatting?

→ manage rules allows users to view and control all conditional formatting rules using this option, you can;

1. edit existing rules
2. delete unnecessary rules
3. change rule priority (order)
4. Apply rules to different range
5. Resolve Conflicts between multiple rules

⑦ How can you apply conditional formatting to an entire row based on a cell value?

→ This is done using a formula-based rule & 1

Steps ↓

1. select the entire table or rows.
2. go to conditional formatting → new Rule.
3. choose use a formula
4. enter a formula like $=\$A2="Yes"$
5. Apply formatting → entire row changes when Conditional is met.

⑧ How do you remove conditional formatting from a worksheet?

→ Conditional formatting can be removed easily in steps:

→ Go to Home → Conditional formatting
→ Click Clear Rules

→ Choose ~~to~~ Clear Rules from selected cells or entire sheet

→ All applied formatting rules are removed

→ The original cell formatting remains intact

⑨ What are the limitations of conditional formatting in excel?

→ Some limitations include.

1. Too many rules can slow workbook performance.
2. Complex formulas can be difficult to manage
3. Limited control over some visual style
4. Rules may conflict if priority is not managed.
5. Large datasets can become harder to maintain.

Q6) How would you use conditional formatting to identify duplicate values in a range?

→ excel has a built in option for duplicates steps:

1. Select the data range
2. Go to Home → Conditional formatting
3. Choose Highlight cells Dupes → duplicate values
4. Select a formatting style.
5. Click ok to highlight all duplicate entries.
